

Climate change and a European low-carbon energy system

ISSN 1725-9177

Contents

Acknowledgements	6
Summary.....	7
1. Introduction	9
1.1 Purpose and scope	9
1.2 Climate change and energy use as sustainability issues.....	9
1.3 EU climate change policy developments	10
1.4 Scenarios developed for this report	12
1.5 Outline of the report	14
2. Climate change impacts.....	15
2.1 Overview of impacts.....	15
2.2 Vulnerability and adaptation to climate change	17
3. Climate change targets.....	18
3.1 The Kyoto Protocol	18
3.2 Potential sustainable greenhouse gas concentration and temperature levels	20
3.3 Long-term global and regional emission targets	24
4. A global and European low greenhouse gas emission pathway.....	30
4.1 Introduction	30
4.2 EU emissions in the baseline scenario	31
4.3 The climate action scenarios.....	31
4.4 Comparison with other scenarios	37
5. Policies and technologies for a transition to a European low-carbon energy system	39
5.1 Introduction	39
5.2 Overall changes in the energy system in the climate action scenario ..	40
5.3 Developments in the energy sector and key technologies	43
5.4 Future actions.....	56
6. Costs of a global and European low-carbon energy system	58
6.1 Global low-carbon energy system.....	58
6.2 European low-carbon energy system	61
6.3 Uncertainties and assumptions	66
7. Acronyms	67
8. References	68
9. Annex 1 — Emissions of greenhouse gases by country for baseline, climate action base and extended renewable scenarios....	73
